

SEMANTIC & NON

SEMANTIC TAGS

Semantic Tags:

Semantic tags are used to describe the content of html document.

These descriptions are used by search engines, browsers & UI(User Interface) developers to recognize the content.

- 1) `<header> ... </header>` => It is used to define introductory content such as headings, logo, icon, authorship information, .. etc.,
- 2) `<footer> ... </footer>` => It is used to define footer information such as address, contact information, copyright information, .. etc.,
- 3) `<main> ... </main>` => It is used to define main content.
- 4) `<article> ... </article>` => It is an alternative to `<main>` tag.
- 5) `<section> ... </section>` => It is used to divide main content into sections.
- 6) `<nav> ... </nav>` => It is used to define navigation links.

Non semantic Tags:

- 1) `<div> .. </div>` => It is used to define a division in a document.
- 2) ` .. ` => It is used to mark up a part of the text.

Example:

```
<!doctype html>

<html>

<body>

<header>

<h1 align="center">HTML, CSS & Java Script</h1>

<hr>

</header>

<nav><h2><a href="html.html">HTML</a>|

<a href="css.html">CSS</a>|

<a href="js.html">Java Script</a></h2></nav>

<article>

<section>

<h1>HTML</h1>

<p>HTML stands for Hyper Text Markup Language. It is used to create
web pages.</p>

</section>

<section>

<h1>CSS</h1>

<p>CSS stands for Cascading Style Sheets. It is used to design web
pages.</p>

</section>

<section>
```

```
<h1>JS</h1>
```

```
<p>JS stands for Java Script. <div>It is used to make web pages  
<span>interactive</span>.</div></p>
```

```
</section>
```

```
</article>
```

```
<footer>
```

```
<h3 align="center">Naresh i Technologies, Ameerpet, Hyderabad</h3>
```

```
</footer>
```

```
</body>
```

```
</html>
```
